SURGICAL DRESSING WORKS AND LABORATORIES, OLDBURY.

LOADING UP WAR BOXES OF DRESSINGS FOR SHIPMENT TO SOUTH AFRICA.

PREFACE.

WE have much pleasure in submitting herewith a copy of our new and much enlarged Catalogue of Surgical Instruments and Appliances used in Hospital and Surgical Practice, and trust by unfailing attention to the demands of our many friends and customers, to merit a still larger share of their patronage. Our one aim will always be to supply goods of such a quality and at such a figure that they will in themselves be a recommendation, and continue to maintain the confidence of the Medical Profession and our customers generally which we have hitherto enjoyed.

For facility of reference the Catalogue is sectionised as follows:—

Section 1. Aseptic and Antiseptic Surgical Dressings of every description.

Section 2. Surgical Instruments.

Section 3. Artificial Limbs, Deformity Instruments, etc.

Section 4. Surgical Appliances and Hospital Requisites.

Section 5. Hospital and General Sundries.

Section 6. Hospital Furniture, Utensils, etc.

Workmanship. Experts in each particular branch are employed, and every care is taken that all instructions are intelligently and accurately followed out.

Surgical Dressings. Our success in this department is the most convincing proof as to quality, coupled with the fact that we are at the present time Contractors to His Majesty's Army and Navy, India Office, Colonial Government, and the principal Institutions of Great Britain. For Antiseptic Dressings Lord Lister's formulæ are strictly adhered to, and all the latest machinery is employed in their manufacture.

Sterilization. The latest and most up-to-date appliances are used in this process.

Instruments. We hold a representative stock of Instruments, which have been selected with care, both as regards quality and pattern, in order to give the best possible value. Repairs carefully and promptly executed.

Deformity Appliances. Care is taken that the case for which the appliance is needed or ordered has the greatest consideration in the construction of the requisite article.

Attendants. Experienced Male and Female Assistants are in attendance and can be sent to any part of the country at 24 hours' notice.

Hospital and General Sundries. Our large and increasing business in this department greatly facilitates our ability to execute any order for articles under this heading

Hospital Furniture. Our Catalogue contains the most general articles of Furniture, we shall however be pleased at all times to submit estimates for any other patterns against specifications

Stock. Is very extensive, and in most cases orders can be despatched same day as receipt

Prices. Are to the Profession only, and are subject to alteration with or without notice,

New Accounts. Satisfactory Trade or Bank references required on opening new accounts.

Terms. 2½ % discount monthly. Net quarterly.

Empties. To be returned to Works, Oldbury, Carriage Paid. Full value allowed on receipt. Goods should not be enclosed in packages returned as "Empties."

Conveyance. Carriage Paid on orders of £2 value in Great Britain; Ireland, £3. If no route specified, the most advantageous to the customer will be selected.

Breakages and Errors. Not responsible for breakages. Errors should be reported within seven days.

DECEMBER, 1903

CUXSON, GERRARD & CO.

CUXSON, GERRARD & CO.'S CATALOGUE

OF

SURGICAL DRESSINGS, INSTRUMENTS, APPLIANCES, SUNDRIES, ETC., ETC.

,, ...	2 ,, ,,	,,	2/9	3/9
,, ...	4 ,, ,,	,,	5/-	7/-

ASEPTIC OR STERILISED DRESSINGS.

Packed by Cuxson, Gerrard & Co.'s Patented method.

As supplied to His Majesty's Navy and recommended by E. W. MORRIS, Esq., late Chief Dispenser at the London Hospital.

METHOD OF PACKING PATENTED

Fig. 1.

COMPLETE.

Fig. 2.

THE DRESSING WRAPPED.

Fig. 3.

CYLINDER OR DOUBLE CASE.

The only method of packing which ensures a perfect Aseptic Dressing.

We guarantee these Dressings are submitted to a temperature of 250° F. for 30 minutes at a pressure of 15 lbs. in a steam vacuum autoclave, after the methods of Pasteur and Lister.

Before Sterilization each parcel of Dressing is completely enveloped in a sheet of Cotton Wool, which, as is well known, constitutes the most perfect method for the exclusion of bacteria. The wool wrapping remains on and is only removed the moment the surgeon requires the Dressing. As a further precaution each packet is wrapped in parchment paper and placed in an air-tight dust-proof carton, Cylinder or Cutter Top Tin.

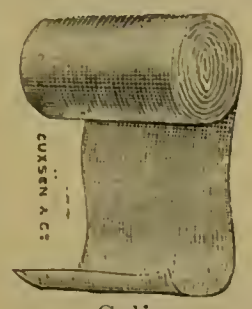

PRICES.

Packed by Patent method in Cardboard Cartons.

				Plain.	Alembroth, Boracic or Cyanide.
Gauze	...	...	1 yard per doz. Cartons	4/-	5/-

SANITARY TOWELS

			No. 1	2	3
6374	"ZYAPER," Patented, in 1 dozen packets ...	per gross	9/-	14/-	18/-

The chief advantage of the "ZYAPER" is that the material is placed in such a manner that the threads run *on the cross* instead of longwise, as is usual, this giving the Towel an elasticity which is of untold benefit to the wearer. In addition to this, the Towel is well finished, only the very best and most *absorbent* materials being used in its manufacture.

The following from the Lady Principal of a large Ladies' Seminary is one of the many testimonials received:—

"I am most highly satisfied with the comfort and sanitation of the new "ZYAPER," as supplied me by Messrs. Cuxson, Gerrard & Co., and will be obliged by their sending me, at their earliest convenience, one gross packets of the same in three sizes (12 gross Towels). I quite think they must supersede all others at present in use."

			No. 1	2	3
6373	"FEMA," in 1 dozen packets	... per gross	5/-	8/-	12/-

This is a good reliable Towel, comparing favourably with other Sanitary Towels on the market.

6-Cell ... ... ,, 8 0 0

Each cell gives a current of 25 ampères.

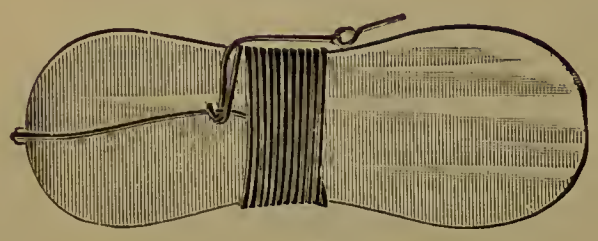

This Battery is suitable for all Electric Lighting and Cautery purposes. An important feature is the addition of a rheostat, by means of which a certain amount of resistance is introduced into the circuit, and can be gradually reduced to the required point suitable for the cautery points and lighting apparatus. The rack action allows of the plates being raised out of the solution when not in use.

Boecker's Cautery Battery, with handle and cautery points, complete ... 2-Cell each 7 0 0

	Dummy Bladder for practising with Cystoscope ... ... ,,	1	0	0

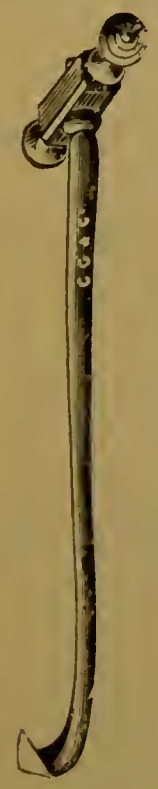

This instrument is universally recognised as the most useful and reliable, it consists of a tube bent at the end, into which part of the instrument the lamp is placed, specially protected by a thick window of rock crystal. To exchange a lamp, the bent part is unscrewed Screw B opens and closes the circuit, and a knob indicates the part of the bladder towards which the prism is directed. By aid of the telescope a surface of three to four inches diameter can be seen at once. The apparatus is provided at the concavity of the elbow with a prism. This form is mostly used, as with its aid more than three quarters of the bladder can be examined. With it, however, the posterior wall cannot be discerned, and a second instrument is required for this purpose, the opening of which is on the convexity of the elbow. A simple glass window here takes the place of the prism, through which the direct observation of the posterior wall and base of the bladder becomes possible.

The telescope can be easily taken out and replaced, so that one telescope serves for two instruments.

ALBUMINOMETER.

3542

3542	Esbach's, for the estimation of albumen, with case ...	each	1	6
	Ditto ditto without case	,,	1	3
	Esbach's Re-agent, in plain stoppered bottles ...	,,	2	3
	Ditto in white enamelled stoppered bottles	,,	3	0

DIRECTIONS.

Pour Urine into the tube up to the mark U, add the re-agent up to R, now close the tube by the thumb, and mix by reversing it to and fro several times, but avoid shaking. Allow the tube to stand upright for 24 hours, then read off on the scale the height of the coagulum. The figures indicate the parts per thousand of dried Albumen in the urine, and give by dividing by ten the percentage. Thus, if four is the point of coagulum, then it contains four parts per 1,000 parts, or 0·4 per cent. When the Albumen is very abundant, it may be diluted with an equal quantity of water, and the result multiplied by two. If the urine is Alkaline, acidify with Acetic Acid.

Urine with less than 0·5 per 1,000 cannot be accurately estimated by this method.

URINE TESTING APPARATUS, Continued.

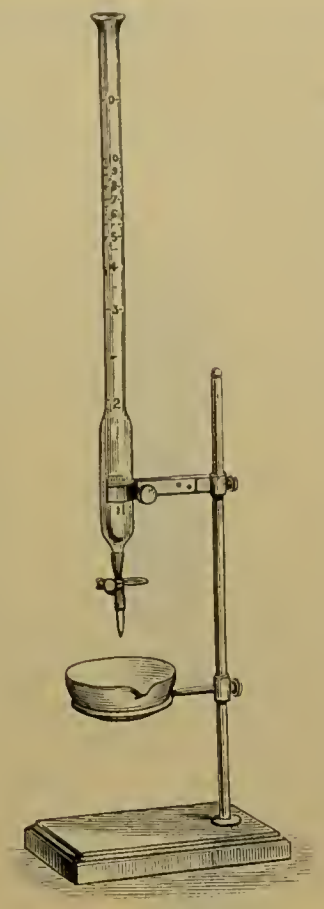

GLYCOSOMETER. GERRARD'S

3544 Complete with Porcelain Dish, Mahogany and Brass Stand, Pinchcock ... ... **12/- nett.**

Fehling's Solution, in separate bottles, per lb., **4 -**; per half lb., **2/3 nett.**

Estimates Sugar in Urine with ease and accuracy in a few minutes. No calculation needed. Reads per-cents or grains per ounce.

Recommended in Haliburton's Physiological Chemistry, Scott's Manual of Urine Testing, and is used in many Hospitals and by eminent Physicians.

3544

2·5 ...	10·95	·4 ...	1·75
2·0 ...	8·75		

DIRECTIONS.—Take either 10 drachms or 10 c.c. of urine found to contain sugar, and dilute with water until it measures 100 drachms or 100 c.c. Mix well. Now fill the Burette to the zero line with the diluted urine. Next introduce 10 c.c. (2½ drachms) Fehling Solution, and 40 c.c. (10 drachms) water into the porcelain dish and coil. Whilst boiling, run the urine from the Burette into the dish in a low stream until the blue colour has gone from the Fehling.

The operation being finished, the level of the urine shows the percentage of sugar present, and the equivalent in grains per ounce is found by reference to the annexed table.

NOTE.—The Instrument is graduated to read percentages of sugar between 10 and 1, but should urine contain more than 10 per cent., then dilute 10 volumes to 200 with water, proceed as before, and multiply the observed percentage by 2. If there is less than 1 per cent. sugar, use undiluted urine, test as before, then divide the reading by 10.

URINE TESTING APPARATUS, Continued.

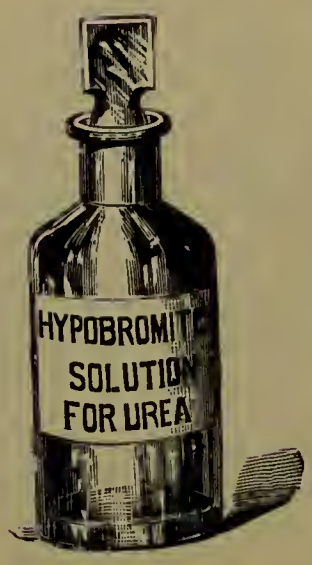

GERRARD'S.

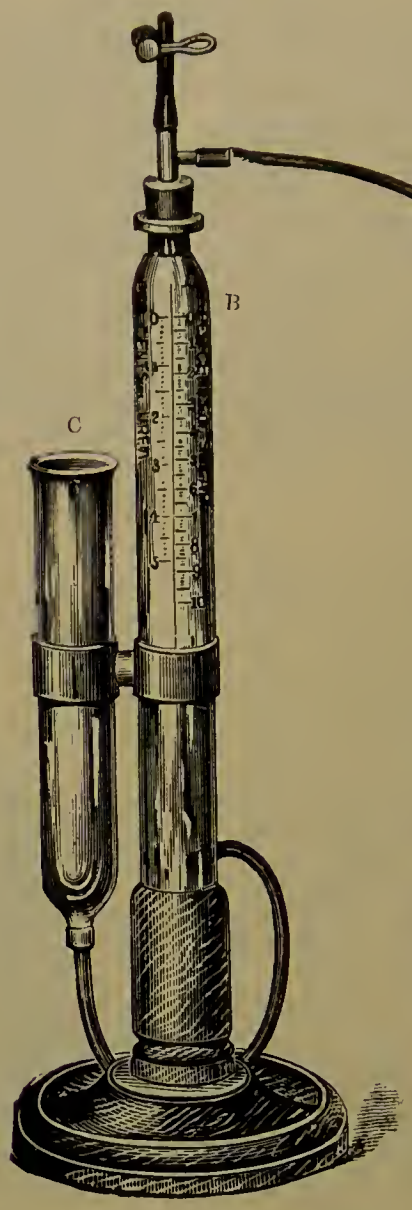

3553

3557

3555

3553 **Ureometer, complete** ... ... each nett 10 6

This is a simple form of apparatus for estimating urea, the operation being completed in less than five minutes. The determinations are scientifically accurate, no calculations being needed, as the result of the analysis is read at once in per cents. of urea.

3555 **"Acme" Sacchar Ureameter**, complete ... ... each nett 12 6

This is s simple apparatus for the direct estimation of Sugar and Urea in Urine; the former by the "Fermentation Test," the latter by the "Hypobromite." This apparatus was originally designed* for the rapid and accurate estimation of Urea for Medical Schools and Hospital Practice, the result being read off the instrument in percentages, no calculation being needed. We now extend the use of this valuable instrument for the estimation of Sugar, by engraving a scale of per cents. of Sugar, which are obtained when a measured volume of Urine containing Sugar is subjected to fermentation by yeast

* *By A. W. Gerrard, late of University College Hospital, London.*

FOR DIRECTIONS FOR USE, SEE NEXT PAGE.

URINE TESTING APPARATUS, Continued.

DIRECTIONS FOR USE: GERRARD'S UREOMETER. Pour into the tube 5 c.c. of the urine to be examined, and in the bottle *(a)* 25 c.c. or 6 fluid drachms of Sodium Hypobromite Solution. Place the tube carefully inside the bottle, as shown on the illustration, avoiding spilling any of the contents. Fill the glass tubes *(bc)* with water, so that the level reaches the zero line, taking care that when this is done the tube *(c)* contains only a little water by being placed high—it having to receive what is displaced from *(b)* by the nitrogen evolved. Now connect the india-rubber tubing to the bottle *(a)*, and noting lastly that the water is exactly at zero, upset the contents of the tube into the Hypobromite Solution. Nitrogen is evolved, and depresses the water in *(b)*. When this ceases, lower *(c)* until the level of the water in both tubes is equal. To be exact, dip *(a)* into cold water to cool the gas before taking a reading, and note the results, which shows percentage of urea.

The Solution of Hypobromite of Soda is made by dissolving 100 grammes of Caustic Soda in 250 c.c. of water, then adding 22 c.c. of Bromine.

DIRECTIONS FOR USE: GERRARD'S "ACME" SACCHAR UREAMETER, for the Estimation of Sugar.—Measure one volume of the urine in the tube so marked, and pour into the bottle "A." Wash out with water, and add to the urine. Dilute further with water if the urine is known to be rich in Sugar. Acidify the urine with Tartaric Acid until acid with test paper (¾—1 % of free acid). Add a few grains of yeast, and connect up the apparatus. The measuring tube "B" is filled to zero with saturated solution of Common Salt (the CO_2 is soluble in water). When "B" is full, "C" must be empty. Place the whole in a moderately warm place—the surrounding temperature should be 80–90° F. When the Fermentation ceases—or from time to time during fermentation—lower "C" until the levels of brine are equal. Allow it to cool, and read off the answer, which shows percentage of Sugar.

For the Estimation of Urea.—Pour into the tube 5 c.c. of the urine to be examined, and in the bottle *(a)* 25 c.c. or 6 fluid drachms of Sodium Hypobromite Solution. Place the tube carefully inside the bottle, as shown in the illustration, avoiding spilling any of the contents. Fill the glass tubes *(bc)* with water, so that the level reaches the zero line, taking care that when this is done the tube *(c)* contains only a little water by being placed high—it having to receive what is displaced from *(b)* by the nitrogen evolved. Now connect the india-rubber tubing to the bottle, and noting lastly that the water is exactly at zero, upset the contents of the inner tube into the Hypobromite Solution. Nitrogen is evolved, and depresses the water in *(b)*. When this ceases lower *(c)* until the level of the water in both tubes is equal. To be exact, dip *(a)* into cold water to cool the gas before taking a reading, and note the results, which shows percentage of urea.

The Solution of Hypobromite of Soda is made by dissolving 100 grammes of Caustic Soda in 250 c.c. of water, then adding 22 c.c. of Bromine.

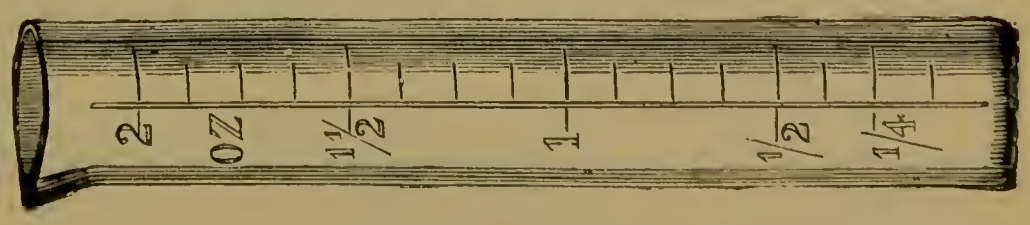

In combining these tests in one instrument we admit that the Fermentation Test is open to several objections, and is to a great extent superseded by the "COPPER REDUCTION TEST;" but we are satisfied that fairly comparable results can be obtained in this way, and as the same apparatus can be used for the two-fold purpose without any expense other than engraving the tube, we feel justified in bringing it forward.

To avoid the danger of the Bromine vapour, the Bromine is sold in hermetically-sealed glass tubes, containing 2·2 c.c.; one of these placed in the large bottle with 25 c.c. of the soda solution gives, when broken by being dropped on the end, the exact quantity of Hypobromite for one estimation of urea, and all bad odour is avoided.

22

20 Artificial Leg, for amputation above knee. The "Anglesey." This is a specially light limb, having the minimum of metal work in its construction. With full length tendon action, and back and fore movement only to ankle joint.

Best quality ... £12 0 0 Second quality ... £9 10 0

21 Artificial Leg, for amputation just above or through knee-joint. This gives room for the long stump, and keeps the length the same as the thigh of the sound limb from crutch to knee. The thigh socket is partly made to lace, by which means it can be adapted to the stump in case of its having shrunk in the middle, thereby preventing the moving of the stump. With full length tendon action and back and fore movement only to ankle-joint.

Best quality ... £12 10 0 Second quality ... £10 10 0

22 Artificial Leg, for anchylosed knee-joint, for amputation below knee, and which has become, through contraction, almost or quite immovable, The tendon action is obtained in this case by attachment to side joints at knee.

Best quality ... £12 10 0 Second quality ... £10 10 0

23 Artificial Leg, for amputation above knee. A strong limb, suitable for working men, without tendons. The movements consist of springs in heel and at knee.

Best quality ... £8 5 0 Second quality ... £ 7 10 0

20

ARTIFICIAL LIMBS, Continued.

26

26 Artificial Leg, for amputation just below knee, with full length tendon action and back and fore movement only to ankle-joint, nickel-plated steel joints at side of knee. Same workmanship and finish as No. 20.

Best quality, £11 10 0 Second quality, £9 10 0

27 Artificial Leg, for amputation below knee. The tendons in this case are made a fixture in the calf, making a strong substantial limb, not liable to get out of order. With nickel-plated steel joints.

Best quality, £9 15 0 Second quality, £9 5 0

28 Artificial Leg, for amputation below knee. The same as No. 27, but with the addition of a leather padded sheath fitted inside the lower socket. Suitable for those who have a tender stump.

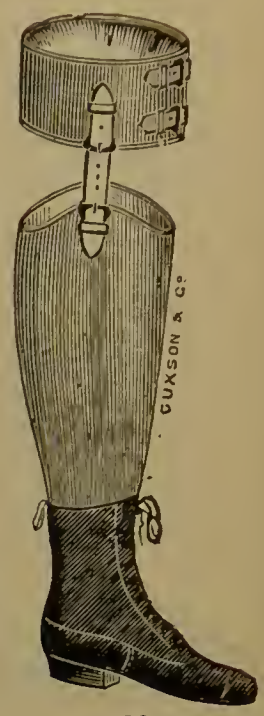

Best quality, £9 15 0 Second quality, £9 5 0

29 Artificial Leg, for amputation below knee. A strong limb, suitable for working men, and not likely to get out of order, without tendon, the movement being obtained by spring in heel.

Best quality, £8 0 0 Second quality, £6 17 6

30 Artificial Leg, for amputation below knee.

For long stump £5 10 0

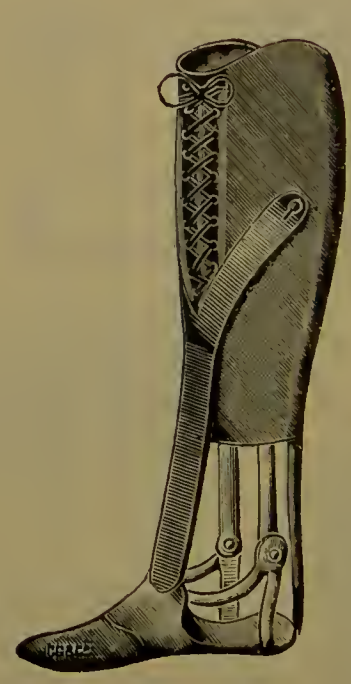

30

77	Thomas's Double Hip Splint, leather covered, with bands complete ...	,,	1	11	0
78	Ditto ditto ditto best quality ...	,,	2	8	0
79	Pattens for above	,,		3	0

Thomas's Hip Splint is acknowledged by the Medical Profession to be the best appliance ever invented for the treatment of all forms of Hip Disease. It can be applied at any stage of the disease, and worn until the cure is complete.

METHOD OF APPLICATION.—The Bands at Chest, Thigh and Ankle are bent to fit comfortably, a broad body bandage is then wound round the vertical stem to obtain a good hold of it, and then passed a few times round the body, an ordinary bandage being applied to the Thigh and Leg.

DIRECTIONS FOR MEASUREMENT.—Circumference of Chest at line of nipples. Circumference of Thigh 2 inches below fold of buttock. Circumference about 3 inches above ankle. Length from line of nipples to 2 inches below fold of buttock. Length from line of nipples to 3 inches above ankle. Send boot for sound leg to have patten affixed. Say whether right or left leg.

In case of a Double Splint being required, the measurements of both limbs should be given.

80	Thomas's Knee Splints, Hospital quality	each		18	6
81	,, ,, best ,, ...	,,	1	4	0
82	,, ,, fitted with sliding foot piece ...	extra	,,		9	6
83	Pattens for above	,,			3	0

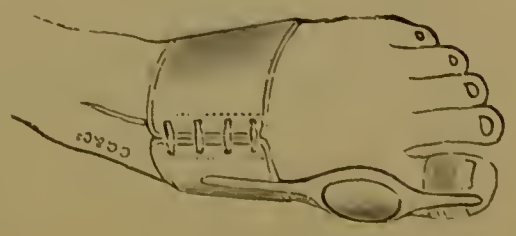

An appliance which, while enabling the patient to move about, has the great advantage of leaving the joint exposed so that the effects of treatment may be observed.

DIRECTIONS FOR MEASUREMENT.—Circumference of Thigh at Crutch. Circumference of Knee. Length from Crutch to Knee-joint. Length from Knee to Sole of Foot. Send boot of sound leg to have patten attached. Say whether right or left leg.

86	Wrenches for bending and adjusting the above Splints	per pair	12	6

DIRECTIONS FOR MEASUREMENT.—Tracing of Foot with toes divided, and state which toes are affected

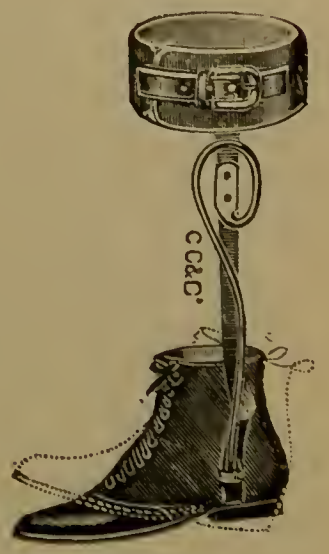

LEG INSTRUMENTS.

112

			s.	d.
110	With toe raising spring, suitable for cases of paralysis and partial paralysis. When the muscles which raise the foot have lost their power, the spring lifts the toes and prevents tripping. With Boots complete ... from each	1	15	0
111	With toe depressing spring, for use in cases of calcaneus. With Boots complete ... from ,,	1	15	0

DIRECTIONS FOR MEASUREMENT.—Circumference below Knee. Circumference of Ankle. Length below Knee to Ankle. Length from Ankle to ground. Tracing of foot and circumference at heel, instep, and ball of toes. State whether right or left leg.

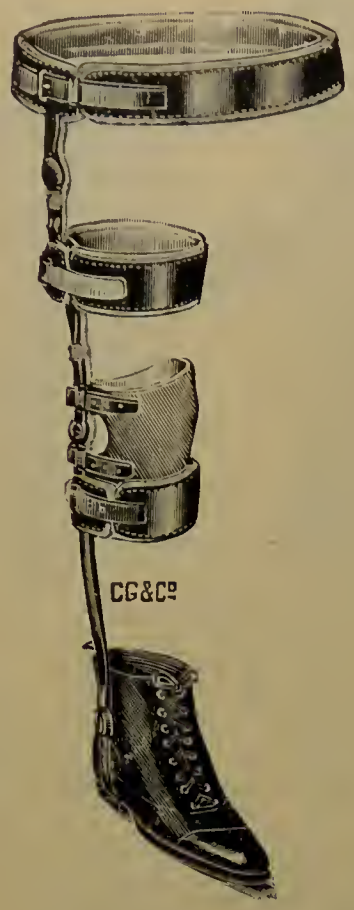

110

			s.	d.
112	Single stem to knee, for outward curvature of Tibia, with sliding piece to admit of lengthenings or growth, with laced tibial band and boots complete ... ... from per pair	2	15	0

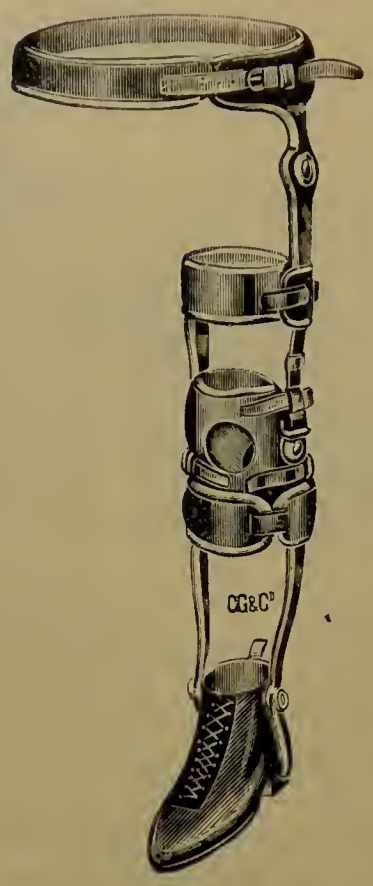

DIRECTIONS FOR MEASUREMENT. Circumference at Knee. Circumference below Knee. Circumference of Ankle. Length centre of Knee to Ankle. Length Ankle to ground. Tracing of foot, with circumference at heel, instep, and ball of toes. State whether right or left leg.

113	Wood Splints, for outward curvature of Tibia, padded, with straps complete per pair	6	6	

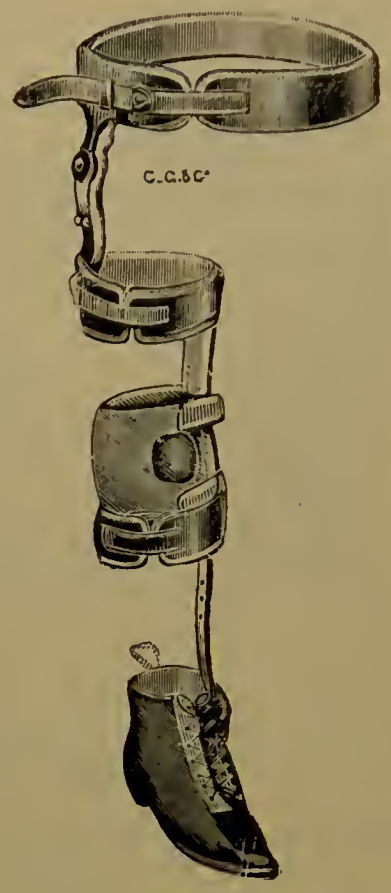

LEG INSTRUMENTS, Continued.

115

118

119

£ s. d.

115 Single Stem to Pelvis, with knee cap and forked strap for ankle and boots complete ... for one leg, from £2 10 0 from per pair 4 0 0

This Support is generally applied for Inward Curvature, as greater control can be obtained over the leg when extended to Pelvis.

116 Single Stem to Pelvis, Double to below knee, with knee cap and forked strap for ankle and boots complete, for one leg, from £2 15 0 from per pair 4 10 0

This Support is suitable for the after treatment of Talipes, when there is usually a tendency to turn the feet in. The reason for putting the steel inside to below knee is that in Varus the ankle falls out, so that the forked strap on the outside of the boot passed round the inner steel keeps the ankle in position.

117 Single Stem outside to Pelvis, inside to below knee, with knee cap and forked strap for ankle and boot complete, for one leg, from £2 10 0 from per pair 4 0 0

This Support is suitable for the after treatment of Talipes, where the double steel below knee is not required, and has the advantage in adult cases of not being so conspicuous.

118 For Paralysis, stem double to thigh, single from thigh to Pelvis, with with ring catch joint at knee, strong knee cap and boots complete. For one leg, from £3 10 0 from per pair 5 10 0

In cases of Paralysis, it is always advisable to fit the ring catch joint at knee, which admits of the patient walking about without danger of the knee giving way, and can be released for sitting down.

119 Single Stem outside to Pelvis, inside to thigh, with knee cap and forked strap for ankle and boots complete, for one leg, from £2 12 6 from per pair 4 5 0

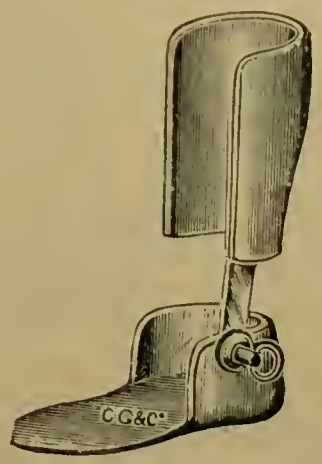

This support is most commonly and frequently used for cases of bow legs with inversion of foot, and is the only reliable means of effecting a cure, as by drawing in the Pelvic band the feet are turned outwards.

DIRECTIONS FOR MEASUREMENT.—Circumference of Pelvis, Thigh, Knee, below Knee, and Ankle. Length Great Trochanter to Knee-Joint. Length Knee-Joint to Ankle. Length Ankle to ground. Tracing of foot on paper, with circumference of heel, instep, and ball of toes. State whether for right, left, or both legs, Male or Female, and age.

SELTZOGENES. Prices NET.

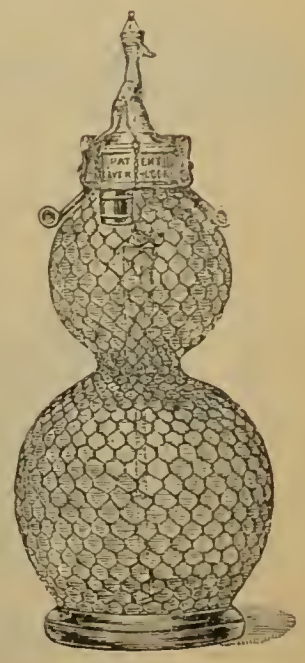

Nickel-plated tops, guaranteed pure tin, best quality glass and rubber, thoroughly tested, complete with drip catcher.

		Pints.	3	5	8
6401	Wire covered screw pattern	each	8/6	12/-	18/6
6404	,, ,, patent lever lock	,,	10/6	14/3	21/-

With the latest and best method of attachment of top to globe, *without screws* of any description, easily manipulated and impossible to get out of order.

	Pints.	3	5	8
Cane covered, extra ...	each	9d.	1/3	1/6

The superiority of the Lever Lock over any other Seltzogene will be evident; previously the tops of all machines have been fitted by means of screws, which has resulted in mishap, by undue pressure or over screwing; the Lever Lock system does away with all such possibilities. *NO FORCE IS REQUIRED*, the tap (which is in one piece) is placed directly on the glass, the levers are adjusted to fall into place on the cap, and are pressed into position with the greatest ease. This is all that is required. The action being without *FRICTION*, no parts can wear out or clog.

OPERATION TABLES.

B3073

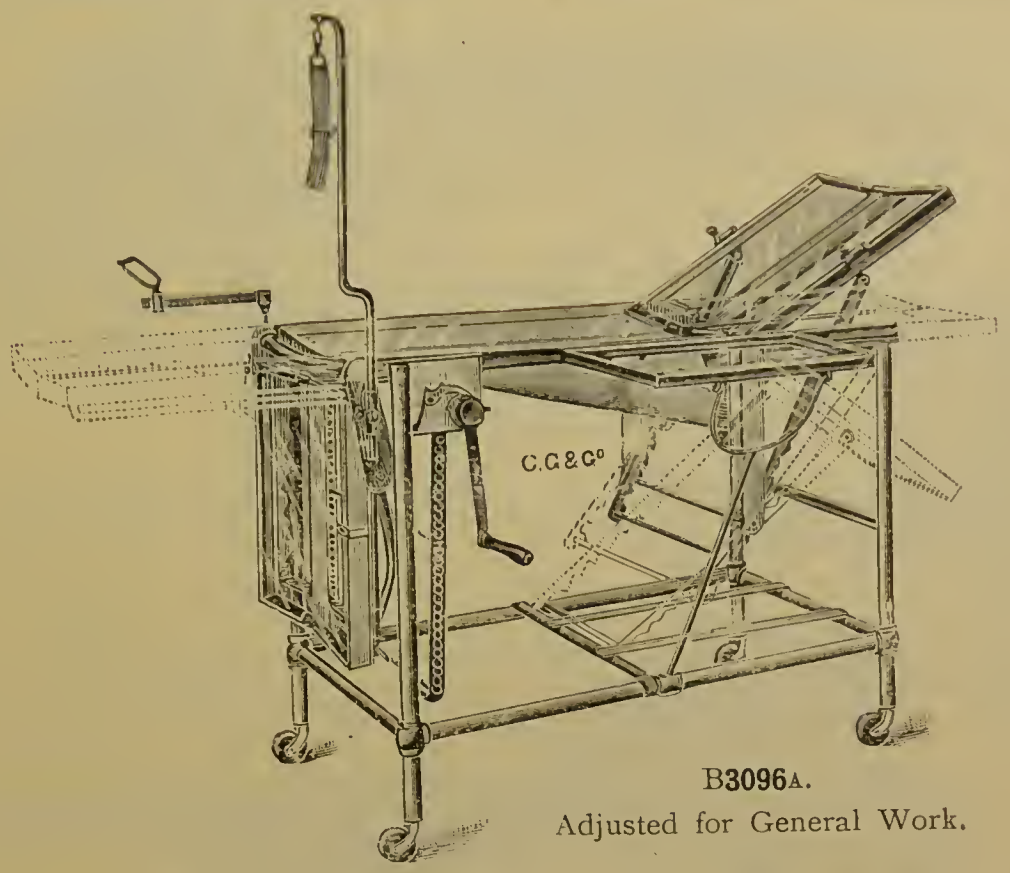

B3076

B3073 Operation Table, white enamelled iron frame, 1 inch plate glass top, size 72×22 inches, fitted with rubber castors £20 0 0

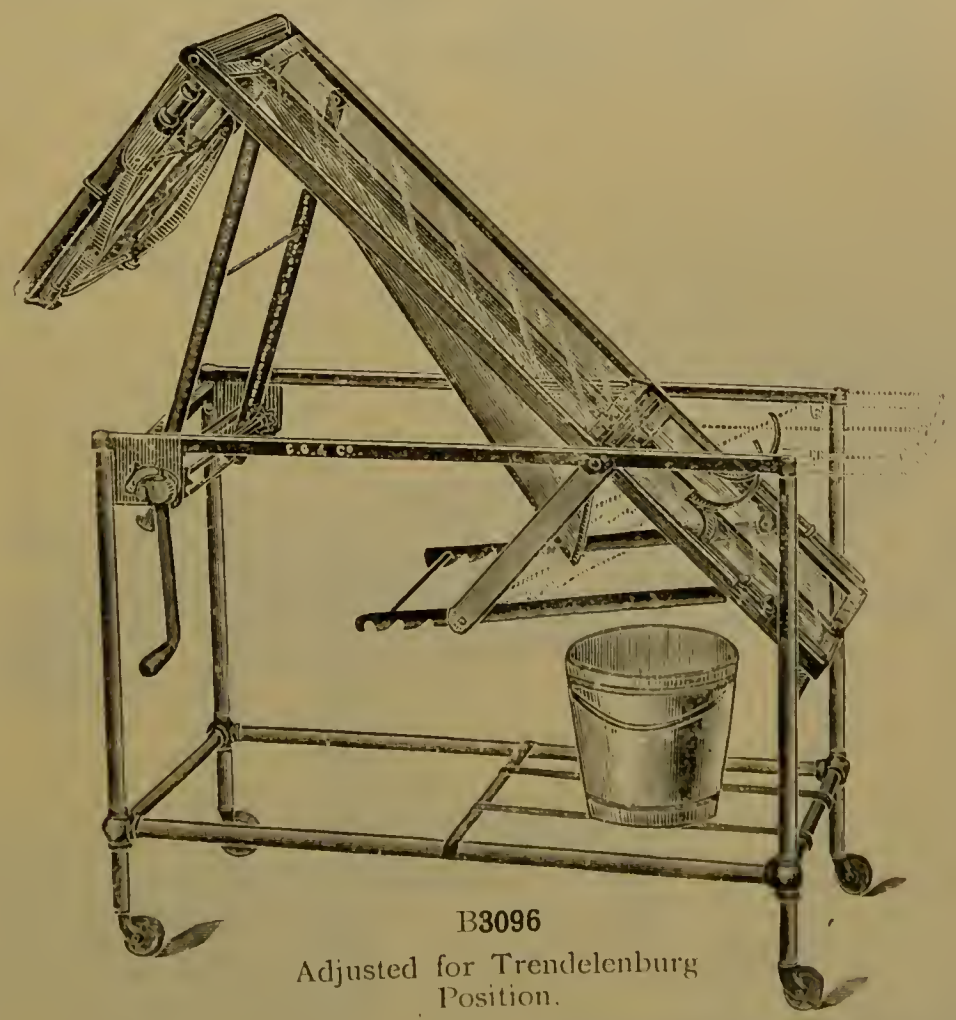

B3076 Portable Operating Table, white enamelled iron. It can be adapted to the horizontal, Lithotomy, or Trendelenburg position, fitted with rubber castors. This Table folds into a space of 40×24×9 inches, complete with lithotomy stirrups £6 5 0

OPERATION TABLES, Continued.

B3096A.
Adjusted for General Work.

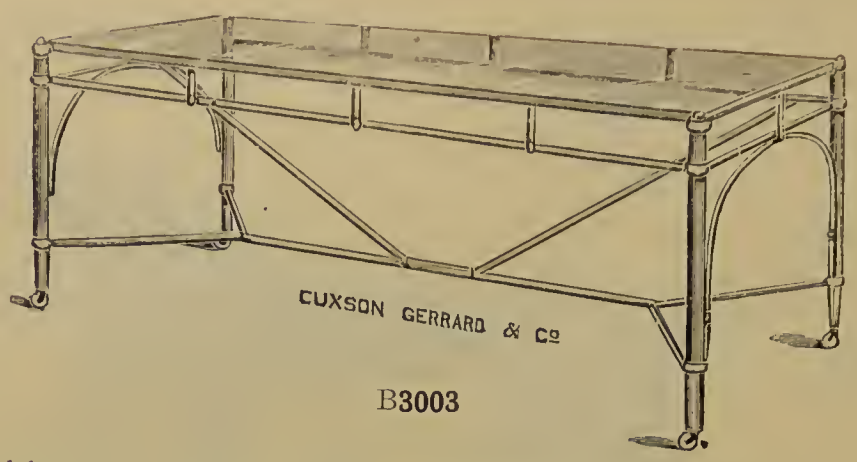

The main advantage of this Table is the ease with which the patient can be placed from the horizontal to any required position, by means of ratchet and cog wheel arrangement, easily manipulated by the operator or nurse. The top converges concavely towards the centre, in which there is a slit, with the drain gutter underneath, which is useful in any position. The head piece permits the head to rest at any desired angle.

B3096
Adjusted for Trendelenburg Position.

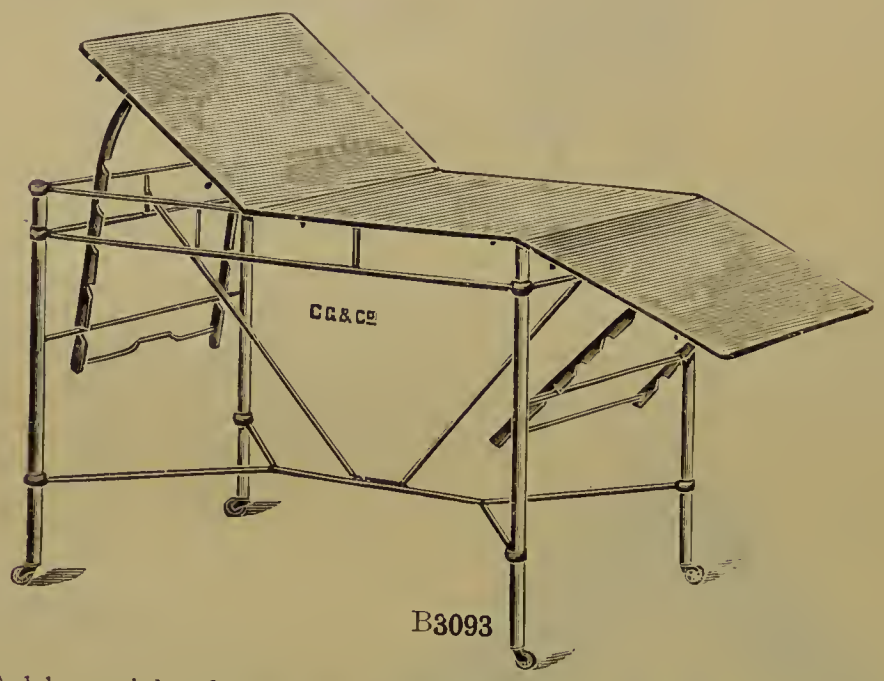

B3096 and 3096A General Operation Table, white enamelled iron, plate glass top, with polished edges, adjustable side table, glass top, fitted with rubber castors, fittings nickel-plated. A very superior Table £27 10 0

IMPROVED DRESSING CASE, for carrying assortment of Instruments, Dressings, &c.

Closed.

B3060 Open.

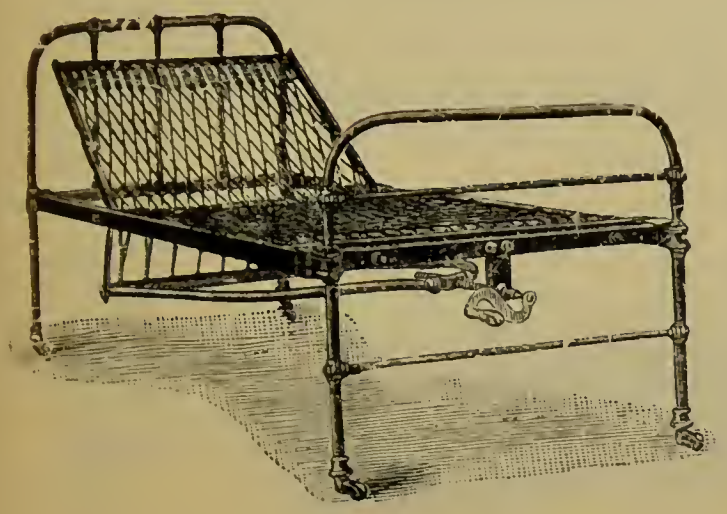

B3066 Size of closed case: 11¾×5½ inch, 8½ inch deep ... ... each 1 7 6

The illustrations represent a most useful and compact form of Dressing Case, specially adapted for the use of General Practitioners, as it allows of an assortment of prepared Dressings and Instruments being carried to the houses of patients in a thoroughly aseptic condition; and in this respect alone is far preferable to the ordinary leather bag.

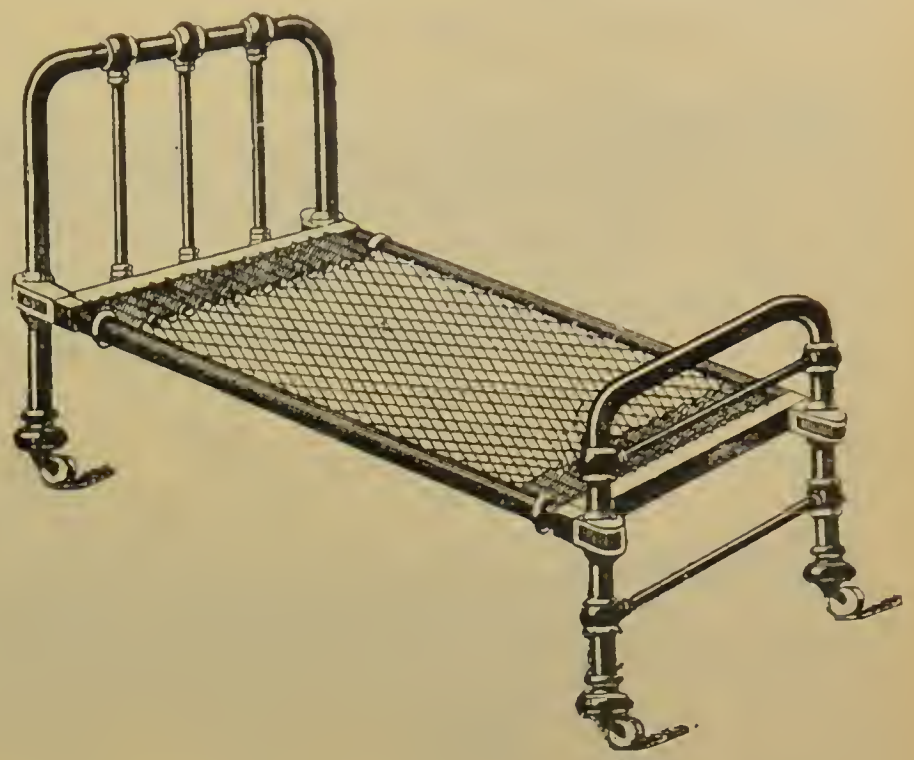

The Case opens out in three tiers, so as to allow ready access to all contents, while an additional fastening provided at the back of Case allows of the upper part only being opened when the contents of the lower trays are not required.

GERRARD'S
Compound Liquid Peptone.

This Peptone is made by a process resulting from a long study of artificial digestion, assisted by the public works of the highest authorities on this branch of science, viz.: KUHNE, CHITTENDEN, NEUMEISTER, SIDNEY MARTIN, Sir WILLIAM ROBERTS, Professors MICHAEL FOSTER, HALLIBURTON, and BURNEY YEO.

INGREDIENTS—

Whole Meat Peptone. Malt Peptone. Detannated Wine.

This preparation is a perfect and complete food, combining a proteid and carbohydrate diet, in a predigested form. In composition and properties it resembles man's best food—bread and meat. Its nutrient value is very high; an ordinary dose of two table-spoonfuls being equal to three ounces of solid food.

The pleasant taste of this food, and freedom from bitterness, causes it to be highly appreciated wherever it is used. In some thousands of cases where it has been given in hospital practice, it has never produced nausea.

Directions for Use.

One or two table-spoonfuls to be taken every four or six hours; for children under 12 years half the quantity. If given by way of the rectum, two table-spoonfuls may be well mixed with the yolk of an egg, and injected every four hours. In the latter form it has proved, in many cases, of great nutrient value.

SOLD IN HALF and ONE POUND BOTTLES at 2/6 and 4/6.

GERRARD'S
Liquor Pancreaticus.

A powerful Solution of the digestive ferments of the Pancreas, containing the Meat Digesting, Starch Digesting, Milk Curdling and Fat Emulsifying principles.

This preparation is made from carefully-selected and fresh Pancreas. It is very reliable, and has a high digesting power.

Sold in	2	4	8 and 16 oz. bottles.	
at	1/6	2/6	4/6	8/- each.

Special Quotations for Bulk to Hospitals and other Large Consumers.

The "WAXOL" Bee Brand

Floor and Furniture Polish

(ANTISEPTIC).

Specially prepared for use in Hospitals, Workhouses, and Public Institutions.

Does not require mixing. Sent out ready for application.

Produces a bright and durable polish. Does not stick or clog.

In drums or tins containing 7, 14, 28, 56, or 112 lbs.

Per lb. Net, 7d.

Drums charged and fully credited if returned in good condition.

Sample free on application.

Patent Polishing Brush for use with the above, each, **16/-**

KING'S "SHINOLA" LIQUID METAL POLISH.

NON-INFLAMMABLE.

AS USED BY

PUBLIC COMPANIES, CORPORATIONS, HOSPITALS, and other PUBLIC INSTITUTIONS.

"SHINOLA" is free from any corrosive, and will not injure any article.

Cleanses and Removes Grease, leaving a Bright Polish.

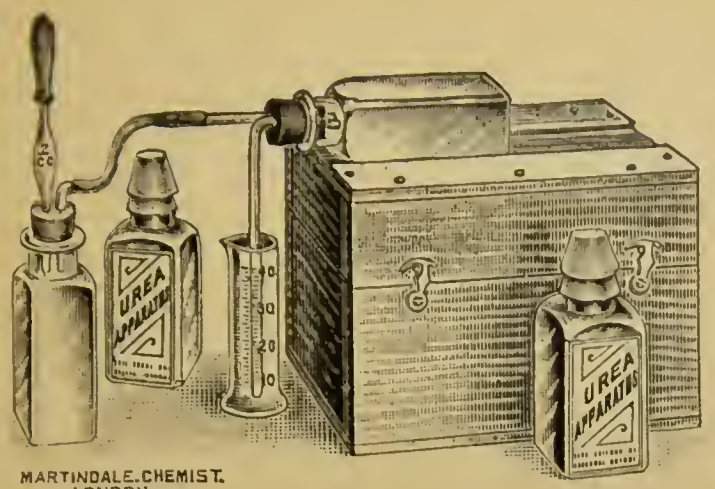

Directions for Use on each Package.

"SHINOLA," in 4d. and 6d. Screw-neck Tins, per doz., **2/6** and **4/-**

" in 1 Gallon Drums... ... per gall., **4/-**

Free Sample upon application.

MARTINDALE'S SPECIALITIES.

MARTINDALE, CHEMIST. LONDON.

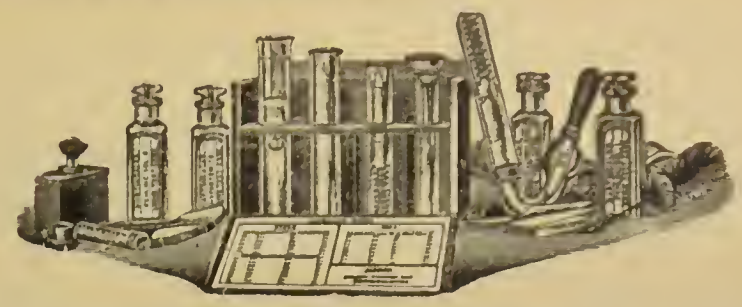

MARTINDALE'S UREA APPARATUS.

Complete, with reagents for 2 doz. analyses.
Each ... 12/-
Refills for at least 2doz. estimations, in 2 stoppered bottles, 2/6

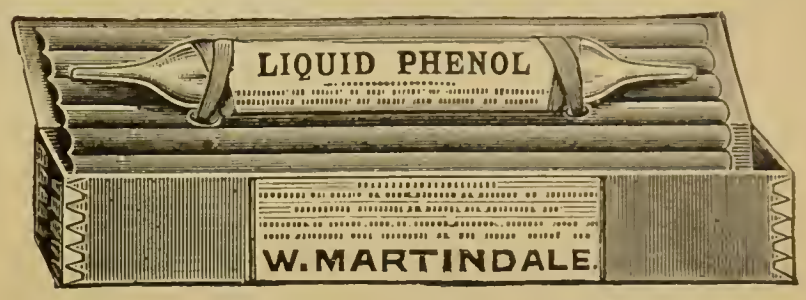

MARTINDALE'S SALINE SOLUTION.

In sealed tubes, each, 1/6; per doz., 14/-

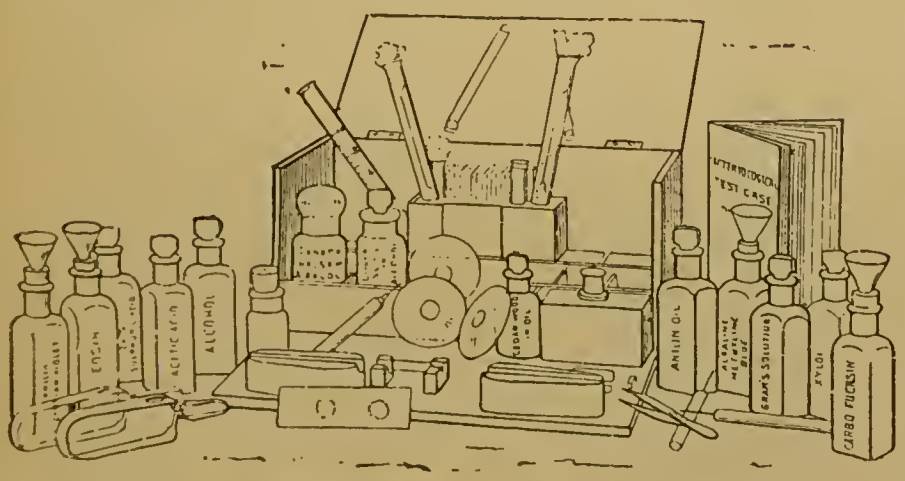

MARTINDALE'S PORTABLE URINE TEST CASE.

With reagents, ready for use, 18/-
Or complete with reagents for stock (recommended for export), 26/-

MARTINDALE'S LIQUID PHENOL.

In sealed tubes, for 1 pint, 1 in 20 solutions.
Per doz. ... 6/-
Similar tubes are prepared containing **Gelatine Saline**, for injection in Aneurism, each, 1/6; per doz., 14/-; and **Glucose Saline**, for artificial feeding prior to operations, &c., each, 2/-; per doz., 18/-

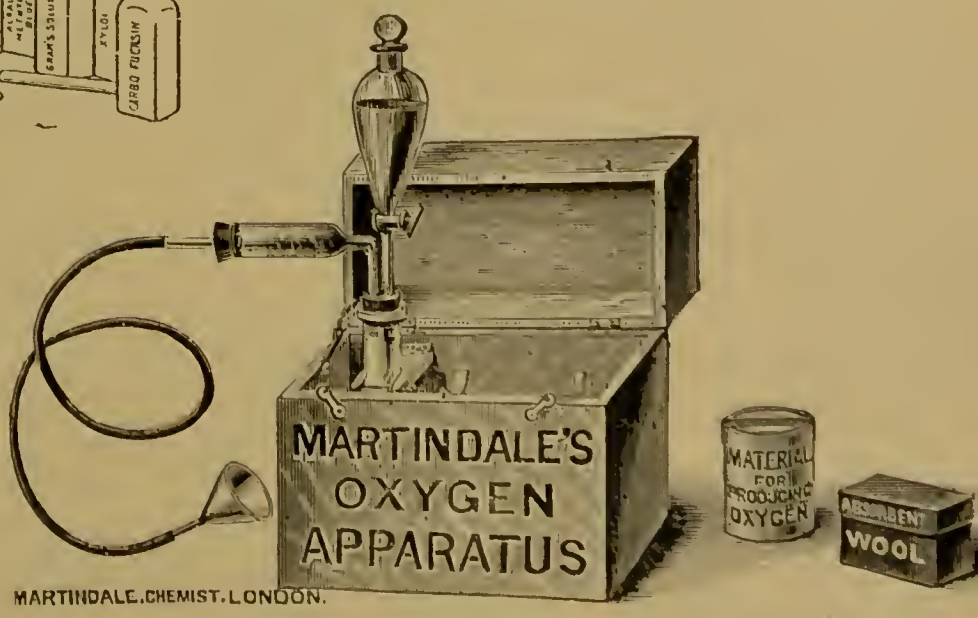

MARTINDALE'S BACTERIOLOGICAL TEST CASE

In solid mahogany, with reagents, stains, &c., ready for use, 42/-
With stock reagents ... 48/-
The same, in mahogany, suitable for the Tropics, 63/-
With stock reagents ... 69/-

MARTINDALE'S OZONIC INHALER.

With medicament, each 1/9; doz. 17/-
Without ,, ,, 1/- ,, 9/-

MARTINDALE, CHEMIST, LONDON.

Tins of Material for recharging, each, 3/6

For the extemporaneous production of Oxygen. Portable and invaluable to the Medical Man resident in the country. Price 42/-. A patent "Oxygenator" is also supplied. Price £8 8 0.

Descriptive matter on application to Cuxson, Gerrard & Co., Birmingham.
